

## GREED

### SYED IRFAN ALI

Humans have been exploiting glaciers through unsustainable practices like over extraction, hydro power projects, reckless tourism, and mining, driven by their greed for water, power, and profit. Rising sea levels, loss of biodiversity, and water scarcity are all consequences of this avarice threatening glaciers and their ecosystems. Stricter laws, community involvement, ethical travel, and investments in renewable energy are needed to counteract this in order to preserve these natural treasures and secure a sustainable future.

By recognising the perils of greed and taking proactive steps to address its role in exploitation of nature and its resources such as glaciers, we can protect these magnificent natural wonders and ensure a sustainable future for ourselves and future generations. Thus, it is imperative for us to understand that glaciers are not just frozen rivers, but they are vital components of our planet's ecosystems, and their preservation is intricately connected to our own existence.

*Dr Syed Irfan Ali is a Consultant Child and Adolescent Psychiatrist working in Ireland. His interests include Mental Health Sciences, art and philosophy. He uses art as a medium to explore mental health issues and also a recreational activity.*
